

NURKHAT MURATKAN

Full-stack Software Engineer | Python / FastAPI / React / TypeScript

+7 (771) 450 8997 | nurhatmurathan001@gmail.com

[GitHub: nurhatmurathan](#) | [LinkedIn: Nurkhat Muratkan](#)

Full-stack software engineer with a strong Python backend focus. Build fulfillment services at Wonder FBO Kazakhstan and develop OptimS, a marketplace analytics platform, from PostgreSQL models and FastAPI endpoints to React interfaces. Experience includes asynchronous workflows, merchant-level access control and AI chat integration with streamed responses.

Technical skills

Backend: Python, FastAPI, Django / DRF, REST APIs, SQLAlchemy, Alembic, asyncpg

Frontend: React, TypeScript, Vite, TanStack Query, Ant Design, Zustand

Data & processing: PostgreSQL, RabbitMQ, FastStream, Taskiq, Celery

Tools: Docker, Git, GitHub Actions, Google Cloud; WebSocket integrations

Professional experience

Wonder FBO Kazakhstan | Backend Developer | Jun 2024 - Present

- Develop backend services with Django and FastAPI for fulfillment operations, including orders, inventory, packaging and delivery workflows.
- Build marketplace integrations and background synchronization for operational data.
- Implement business rules for order processing, stock deductions and packaging services across delivery modes.
- Implement offline order creation with immediate stock deduction and dedicated invoice labeling.

Game of Drones | Software Engineer | Dec 2023 - Feb 2024

- Developed a NestJS backend, WebSocket-based device control through a web interface, and tournament logic.
- Configured GitHub Actions CI/CD and deployed the application to Google Cloud.

Jasaw.shop | Software Engineer | Jul 2023 - Dec 2023

- Built marketplace APIs with Django REST Framework and PostgreSQL; integrated Google Cloud SQL and Cloud Storage.

SDU ITPark | Software & Hardware Engineer | Jan 2022 - Sep 2023

- Developed graphical user interfaces for hardware projects using JavaScript and HTML; worked with Arduino and ESP controllers.

Selected project

OptimS | Full-stack development | Analytics platform for Kaspi marketplace sellers

- Develop FastAPI APIs and React / TypeScript / Vite interfaces for sales, advertising and profitability analytics, using Ant Design and TanStack Query.
- Build asynchronous data processing and scheduled synchronization with RabbitMQ, FastStream and Taskiq; use PostgreSQL with async SQLAlchemy.
- Implement user roles and merchant-level data access, separating access to each seller's data.
- Integrate the AI analyzer chat with session management and streamed responses between the React client and backend gateway.
- Manage selected-merchant and filter state with Zustand, preserving user selections across sessions.
- Build scheduled Telegram reports and price / inventory synchronization with external marketplace APIs.

Education & achievement

SDU University | Bachelor's degree | 2021 - 2025

First place, university competitive programming championship (team).
